## **"MECK PROTECTOR (MP)"**

**STOP COSTLY CHANGER REPAIRS DUE TO ELECTRICAL SURGES - GUARANTEED**

### **BENEFITS OF THE "MP"**

Absorbs all voltage surges up to 60 volts. MDB normally operates at 34 volts.

Unlike breakers, no need to run out to location to reset.

Saves the operator service call costs due to surges and coin mechanism outages

MP will continue to protect the coin mechanism even after an electrical surge

Works with all MDB Coin Mechanisms, Bill Validators and Debit/Credit Card Readers including Mars, Coin Acceptors (Coinco) and Conlux.

### **EASY TO INSTALL**

The MP simply plugs into your existing wiring between your power supply and the "Y" connection before money handling units. Since all MDB units have standardized connection plugs, there is no need for an adapter to fit your machine. One model fits all.

### **THE "MP" GUARANTEE**

If for some reason the "MP" does not protect your MDB coin mechanism or DBA, we will replace the MP free for up to two years from date of purchase.
